Measures, adding columns, DAX

- **Required column**: need to add conditional column: add column >>> conditional column>>> IF condition. (please check the notes on how to add required column (with images) at the end of this document)

1. Attrition rate
   Yes = 1
   No = 0

2. Age Group
   IF:
   <25 = <25
   <35 = 25 - 34 Age group
   <45 = 35 – 44 Age group
   <55 = 45 – 54 Age group
   Else:
   > 55 = >55

3. Distance Travelled
   IF:
   <10 = (0-9) Near
   <20 = (10-19) Far
   <30 = (20-29) Very Far
   Else:
   >30=>30

4. Performance Rating
   3 = Low
   4 = High

5. Job Satisfaction Status
   1 = Highly Dissatisfied
   2 = Dissatisfied
   3 = Satisfied
   4 = Highly Satisfied

6. Work Life Balance Status
   1 = Extremely Challenging
   2 = Challenging
   3 = Manageable
   4 = Satisfactory

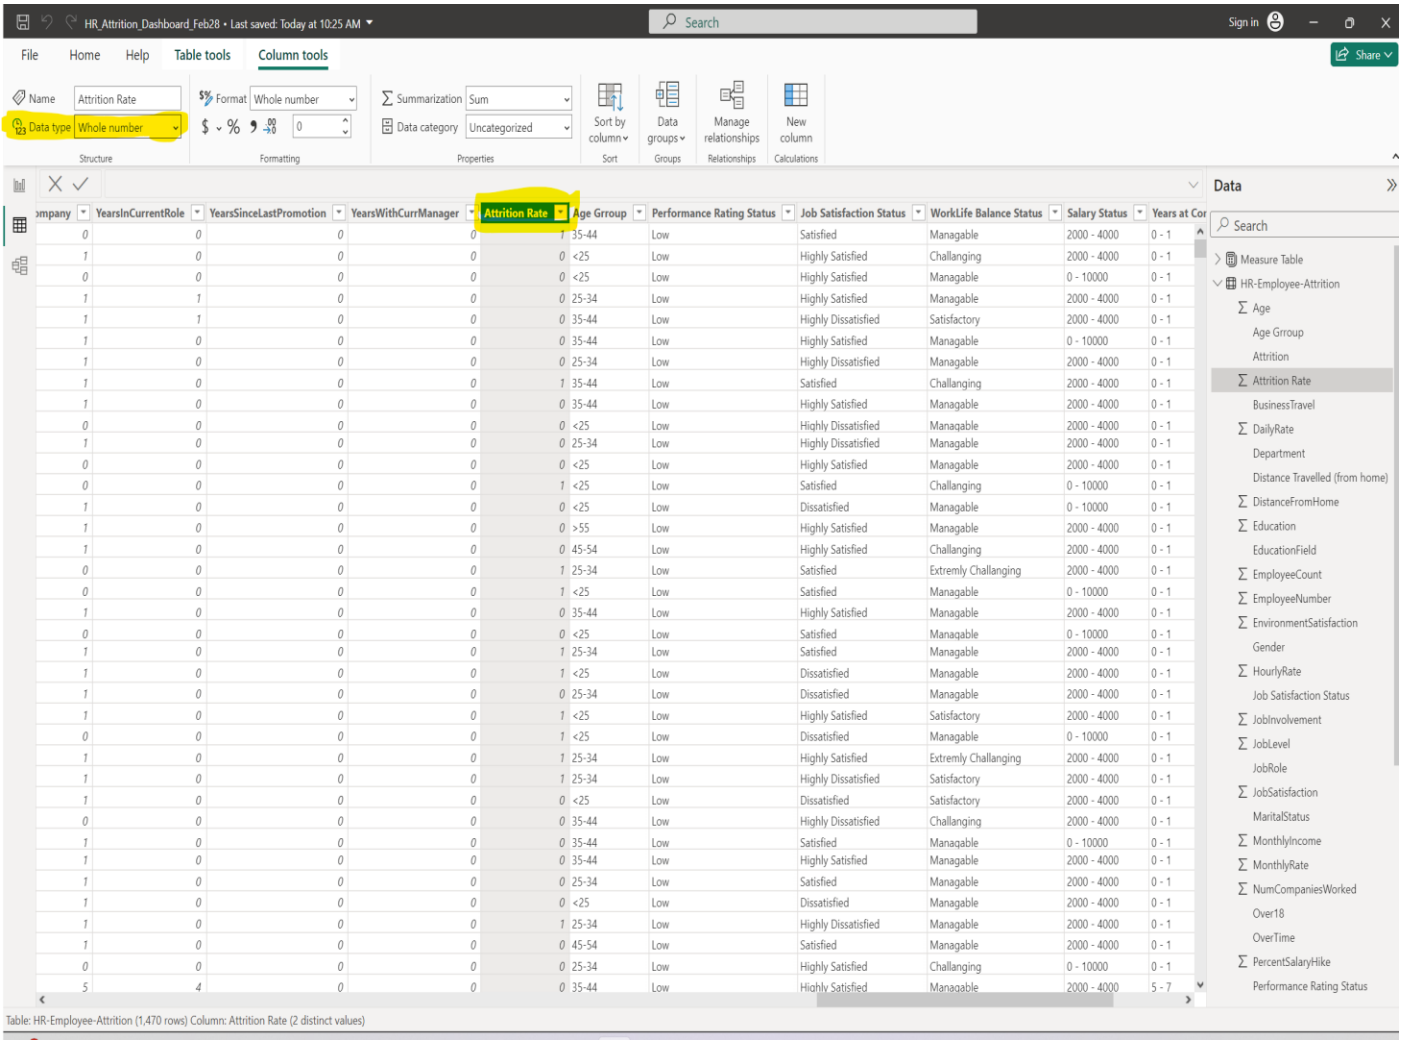
7. Years At Company (in total)
   < 2 = 0-1 Years
   <5 = 2-4 Years
   <8 = 5 – 7 Years
   <10 = 8 – 10 Years
   >10 = >10

8. Salary Slab
   <2000 = 0-1 k
   <5000 = 2 – 4 k
   <8000 = 5 – 7 k
   <11000 = 8 – 10 K
   >11000 = >11000

Measures:

1. Total Employees = COUNTROWS('HR-Employee-Attrition') // this is the count of total no. of employees in the organization//
2. Current Employee = [Total Employees]-[Attrition_Employee] // this calculates total no of current employees in the organization//
3. Attrition_Employee = SUM ('HR-Employee-Attrition'[Attrition Rate]) // this calculates no. of employees left in the organization//
4. Attrition Percentage = DIVIDE([Attrition_Employee], [Total Employees]) //this calculates attrition rate of the organization (it includes all the departments)//
5. Female = CALCULATE ([Total Employees],'HR-Employee-Attrition'[Gender]="Female") // this calculates no. of FEMALE employee in the organization //
6. Female Attrition = CALCULATE([Attrition_Employee],'HR-Employee-Attrition'[Gender]="Female")
7. Male = CALCULATE ([Total Employees],'HR-Employee-Attrition'[Gender] = "Male") // this calculates total no. of MALE employees in the organization//
8. Male Attrition = CALCULATE([Attrition_Employee],'HR-Employee-Attrition'[Gender]="Male") //this calculates the No of total MALE attrition from the overall all attrition percentage//
9. High_Performance_Employees = calculate([Attrition_Employee], 'HR-Employee-Attrition'[Performance Rating Status] ="High") // this calculates no of employee performing HIGH in the organization based on the attrition of the total employee - that means we want to know how many high performing employees have left the job (attrition of HIGH performer)//
10. Low_Performance_Employee = CALCULATE([Attrition_Employee], 'HR-Employee-Attrition'[Performance Rating Status] ="low") // this calculates Low performance employees from the total attrition, that means how many total LOW Performer from the total attrition employee have left the organization//
11. HR_Current_Employee = CALCULATE ([Current Employee], ('HR-Employee-Attrition'[Department] = "Human Resources")) // this calculates no. of current (total no of employees currently working in HR) employee for Hr department//
12. Sales_Current_Employee = calculate ([Current Employee], ('HR-Employee-Attrition'[Department]="Sales")) // This calculates no of current employee in sales department (Means no of employees currently working in sales department), (calculating no of employee in each department)//
13. R&D_Current_Employee = CALCULATE ([Current Employee], ('HR-Employee-Attrition'[Department] = "Research & Development")) // This calculates no of current employees working in R&D department (Means employees currently working in R&D //
14. HR_Dep_Attrition = CALCULATE([Attrition_Employee], ('HR-Employee-Attrition'[Department]="Human resources"))// (department wise attrition), this calculates no of employees left from HR department, attrition from HR department//
15. Sales_Dep_Attrition = CALCULATE([Attrition_Employee], ('HR-Employee-Attrition'[Department] = "Sales")) // (department wise attrition), this calculates no of employee left attrition) from sales department//
16. R&D_Dep_Attrition = CALCULATE([Attrition_Employee], ('HR-Employee-Attrition'[Department] = "Research & Development")) // (department wise attrition), this calculates no of employees left from the R & D department //

Note: change data type as shown below in power quay editor otherwise it will not be able to give correct result in case we do the summation.



...mpany	YearsInCurrentRole	YearsSinceLastPromotion	YearsWithCurrManager	Attrition Rate	Age Group	Performance Rating Status	Job Satisfaction Status	WorkLife Balance Status	Salary Status	Years at Cor

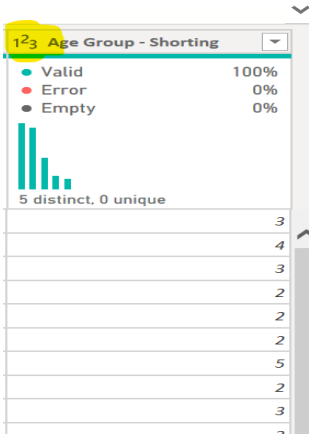
1	0	0	0	1	25-34	Low	Highly Dissatisfied	Managable	2000 - 4000	0 - 1
1	0	0	0	0	45-54	Low	Satisfied	Managable	2000 - 4000	0 - 1
0	0	0	0	0	25-34	Low	Highly Satisfied	Challanging	0 - 10000	0 - 1
5	4	0	0	0	35-44	Low	Highly Satisfied	Managable	2000 - 4000	5 - 7

Note : how to change slab data which is string & we need to convert it in to whole number. Ex : - 2000 – 400 salary, <25, 25-35 age. In the power query you do not have the capabilities to convert those directly.

So,


Go to add column >> add conditional column >> then write IF condition >>>give slab a number (ex:- <25 = 1, 25-35=2…) >>>> Close & apply
